

DO YOU REALLY NEED TO CLEAN FOOD PACKAGING BEFORE RECYCLING?

YES!!!
in the UK we do

Remove any leftover foods

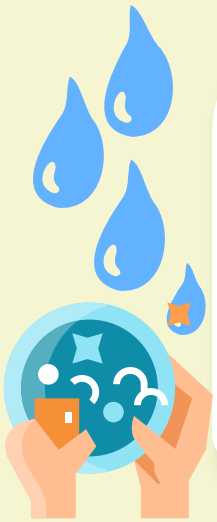

Rinse to remove any product left

NO - Product is still stuck

YES - It's completely clean

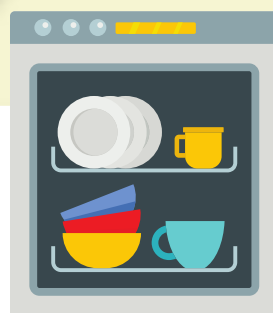

The resources used for cleaning also matter!
So, try to clean your food packaging in clever ways that **use less resources!!!**

Water used for other purposes can be utilized to rinse the packaging...
For example by placing it in the sink.

Glass packages can be washed in the dishwasher

Paper packaging, such as pizza boxes, may be impossible to clean

Dirty paper packaging should go to **general waste**, since oils/ fats can affect the recycling process of paper!
